Smart farming using IOT Application

Says
what have we heard them say?

Gets signals from the sensors and converts those signals to digital and then process the data

Mainly we use system to monitor the activities of the plant and automatically makes the user alert and prevent the plant attacks

Thinks
What are their requirments and needs

Where it is helping the plant growth and nourishment

Is it good enough for our plant?

It has the ability and quality to respond appropriately

What does?
what the behaviour we observed

It mainly ensure the plant safety and quality.

May chance of failing the whole sensor in the plant project

Feels
farmers emotions and opinions?

It mainly analyze the data what it gets

It will be a life saver for the plant and it helps regulating the plant growth
